

CHEVRON

Superior Secondary Belt Cleaning Systems

ASGCO®

Complete Conveyor Solutions

The **Chevron** secondary belt cleaner uses the speed and force of the belt rolling over our patented rubber disks. The unique rotary fingers are forced against the base of the chevrons to dislodge material from the belt.

- **Sweeping Action** - of each disk cleans in front of and behind each and every chevron.
- **Easy Maintenance** - no motors, air nozzles, or other problematic equipment to maintain.
- **Works Great** - in the pulp and paper, fertilizer, potash, and other bulk material industries where chevron style belts are heavily used.
- **Solid or Notched** - 8" (200mm) diameter abrasion resistant rubber disks are available depending on the spacing of the chevrons and the conveyor belt speed.

Dual shafts of rotating abrasion resistant disks

Patented Design

Dual shafts of rotating abrasion resistant disks

Unique rotary fingers are forced against the base of the chevrons to dislodge material from the belt.

Notched disks: 1 foot pitch chevron or less

Solid disks: 2 foot pitch chevron or more

The edge of the disk sweeps transversely across the belt surface as the disk flexes.

- 8" abrasion resistant rubber disks provide a gentle, provide a gentle, thorough squeegee action for very effective cleaning
- Disks are independently flexible so each disk rapidly adjusts to belt variation, wear and cupping
- Disks work well on vulcanized or mechanical splices
- Disk life is one to four years depending on material and operating conditions
- Handles corrosive and abrasive materials - wet or dry

Providing the World Material Handling Industry with Productive, Safe and Reliable "Complete Conveyor Solutions."
